

## **Appendix A9: Mercury and Radiological Data from the Full-Scale Column Tests**

This appendix contains information pertaining to the removal of mercury and radiological constituents from the treated stormwater by each of the mixed media columns during long-term, full-depth, column tests. The appendix is organized showing the removal results for these constituents for each of the four mixed media combinations examined, in the following order:

- Rhyolite sand, surface modified zeolite, granular activated carbon, and peat moss (R-SMZ-GAC-P)
- Rhyolite sand – surface modified zeolite – granular activated carbon (R-SMZ-GAC)
- Layered site filter sand, site zeolite, and granular activated carbon (layered S-Z-GAC)
- Rhyolite sand and surface modified zeolite (R-SMZ)

Each section describes performance with the following plots and tables:

- ANOVA for regression plot of influent vs. effluent concentration for each constituent
- Line plot showing influent vs. effluent concentrations
- Scatterplot of influent vs. effluent concentrations, with best-fit regression line and equation if significant

In each of these sets, these analyses are presented for different heavy metals and trace constituents:

- Mercury
- Gross alpha
- Gross beta
- Radium 228
- Radium 226
- Total alpha radium
- Tritium
- Strontium 90
- Uranium, total

### **Locations of Major Appendix A9 Sections:**

Rhyolite sand, surface modified zeolite, granular activated carbon, and peat moss (R-SMZ-GAC-P) .....	2
Rhyolite sand – surface modified zeolite – granular activated carbon (R-SMZ-GAC) .....	11
Layered site filter sand, site zeolite, and granular activated carbon (layered S-Z-GAC) .....	21
Rhyolite sand and surface modified zeolite (R-SMZ) .....	30

## Rhyolite sand, surface modified zeolite, granular activated carbon, and peat moss (R-SMZ-GAC-P)

### Mercury

Mercury: regression not significant
